

Application & Dosage Guide

Recommended quantities by plant type, bed size and growing stage. These are general starting points — for a specific crop, bed size or growing stage, contact our team and we'll suggest a starting quantity for your setup.

Three ways to apply Urvaram

1. As a Soil Additive

Loosen the upper soil around the plant. Apply the approved quantity, mix gently into the top layer and water after application.

2. In a Potting Mixture

Blend Urvaram Vermicompost into the growing medium before planting. A provisional maximum of 20% may be communicated only after the final product guidance is approved by Urvaram's agricultural expert.

3. For Established Plants

Apply periodically as a light top dressing, mix gently and water normally. Avoid placing a concentrated quantity directly against delicate stems.

Vermicompost vs. vermiwash

Vermicompost is the solid, matured soil conditioner — mixed into soil or a potting blend for structure, moisture retention and long-term biological activity. Vermiwash is a filtered liquid collected from a separately managed vermiculture system, diluted and used alongside regular watering as a supplementary feed. Most gardens benefit from both: vermicompost as the soil-building foundation, vermiwash as the in-between feed.

Coverage reference by pack

Vermicompost Home Starter Pack (1 kg)	approx. 10-12 premium pots
Vermicompost Garden Pack (5 kg)	approx. 20 sq. ft of garden bed
Vermicompost Garden Pack (10 kg)	approx. 40 sq. ft of garden bed
Potting Mix Booster (2 kg)	approx. 10-12 litres of potting mix
Kitchen Garden Combo (2 kg Vermicompost + 250 ml Vermiwash)	approx. 10-12 sq. ft of garden bed
Repeat Supply Subscription (5 kg/2 months)	approx. 40 sq. ft of garden bed
