

Company Profile

A short introduction to Urvaram for institutional and bulk buyers. Urvaram is a premium vermicompost and organic agriculture company working across production, plant setup, farmer support and responsible soil care.

Our Vision

To nurture a healthier, greener, and more sustainable future by promoting organic living and natural farming practices. Urvaram envisions a world where healthy soil, nutritious food, and environmentally responsible agriculture contribute to healthier lives, greater longevity, and the well-being of generations to come.

Our Mission

Our mission is to enrich the soil naturally through high-quality organic vermicompost, empowering farmers, gardeners, and communities to grow healthier food without harming nature. We strive to promote sustainable agriculture, restore soil health, reduce dependence on chemical inputs, and inspire a healthier way of living — creating lasting benefits for people, plants, and the planet.

Our Values

Quality without shortcuts, transparency in sourcing, and long-term relationships with the farmers, dairies and partners who make Urvaram possible.

From dairy farm to growing bed

Our raw material is sourced from approved dairy farms and includes both cow and buffalo manure. It is prepared, naturally transformed, matured and screened before it reaches the grower — whether that grower is tending a single indoor plant or preparing land for afforestation. Every batch passes through the same controlled cycle: selection, precomposting, vermicomposting, moisture and temperature control, maturation, screening and hygienic packaging — typically two to three months from start to finish.

What we offer

- Vermicompost Production:** Fully managed production using responsibly sourced dairy manure, earthworms, maturation, screening and hygienic packing.
- Plant Setup:** Complete support for site assessment, infrastructure planning, bed preparation, training and operational guidance.
- Training & Consultancy:** Practical process guidance for raw-material handling, earthworm care, moisture management, quality and production.
- Grow With Us:** A structured partnership model with setup assistance, training, quality guidance, market connection and long-term support.
- Organic Resource Processing:** Assessment and processing of approved biodegradable agricultural and dairy resources.
- Kitchen Garden Workshops:** Practical learning for soil health, vermicompost application and home food growing.
